## Lighting Industry to discuss latest technology in lighting controls

May 16 2017

Australia's lighting industry is set to discuss the latest technology in lighting controls in Sydney this week at a forum for Australia's leading electrical contractors, lighting systems designers and lighting industry opinion-leaders.

Lighting Council Australia CEO Richard Mulcahy said that key players in the industry are excited to hear about new lighting controls technology, including products on offer from Gerard Lighting, one of the nation's largest lighting companies.

Products to be explained include the Rapix Lighting Controls system that makes lighting control for commercial buildings simpler to design, easier to install, and faster to commission. All of this helps achieve more in less time, and greatly reduces cost and risk.

Lighting control is an increasingly important part of overall lighting design in commercial buildings, and today's lighting control technologies offer more scope to manage costs and deliver business benefits than ever before. A well-designed lighting control system can reduce lighting energy costs by up to 60%, and help companies meet their sustainability goals.

The RAPIX Lighting Control System has been built from the ground up to save energy, save time and save money; it is based on Ethernet and DALI, the International Standard for lighting control.

Lighting Council Australia is the peak body for Australia's lighting industry and represents more than 100 companies providing lighting to the Australian market. The lighting controls will be discussed at a forum at Rydges Parramatta on May 18 2017.

ENDS.
